

The surgeon is virtually transported inside to operate with unprecedented precision.

**ROBOTIC SURGERY
only at
MONMOUTH
MEDICAL CENTER**

At Monmouth Medical Center, robotic surgery allows our surgeons to perform minimally invasive surgeries with all the control, range of motion, and 3-D visualization of traditional "open" surgery — but with significantly less pain, scarring and recovery time for patients.

And for surgeons, the computer-enhanced technology and robotic precision ensures steadier hands, improved dexterity, and a level of surgical precision never before possible.

That's the power of a teaching hospital.

To see if robotic surgery is right for you, call **1.888.SBHS.123**.
